

2023 Passive House Network Conference

# Passive House For Everyone!

Kids learning Passive House through the arts.

## What is Passive House For Everyone?

Passive House For Everyone (PHFE) is a non-profit that engages children and teachers to explore Passive House building sustainability through the arts. [Watch the videos.](#)

## The Process

PHFE facilitators provide a presentation on Passive House principles with contextual and building science framework of why Passive House is relevant to combating climate change and how this is achieved through Passive House building strategies.

Students then begin their explorations of the Passive House principles through song, dance, poems, drawings, models and more - wherever their expressive creative impulses lead them. PHFE facilitators then provide feedback to the students as they develop their ideas.

Once the projects are completed students document their work through video using simple tools like a cellphone. The projects are collected and PHFE facilitators assemble the works in a complete edited video that is shared among the school. The videos will then be shared at the national conference in Denver, a celebration of the students work and an inspiration to others.

## Time Requirements

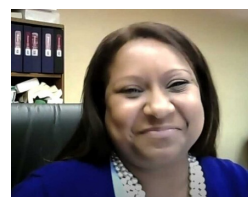

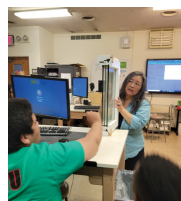

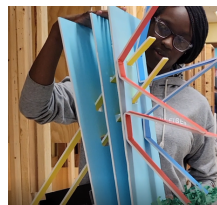

- 45 min-3 hrs: The initial introductory presentation and workshop.
- 3-4 weeks: The students develop their exploration in class time.
- 2-3 weeks: Editing by PFE facilitators

## Funding

Funding needed will be raised by The Passive House Network through sponsor donations. We encourage your organization to become a sponsor! Email [phrm@passivehousenetwork.org](mailto:phrm@passivehousenetwork.org)

Passive House For Everyone! is part of the [2023 Passive House Network Conference](#) effort to expand the conversation about how Passive House building helps us address our climate, health and social equity crises. Join us!

Assistant Principal, Boys &  
Girls High School,  
Brooklyn, NY

*"Exploring passive house building principles through the arts is definitely beneficial to the learning process as it introduces ideas in meaningful and fun ways where students can express themselves freely while helping to create a culture of awareness of environmental sustainability. I have observed the students in class, and I can honestly say that they have truly truly enjoyed the experience."*

Ask us about community partnership and sponsorship opportunities. We want to work with you! Email [phrm@passivehousenetwork.org](mailto:phrm@passivehousenetwork.org)
